

Digital Literacy Statistics

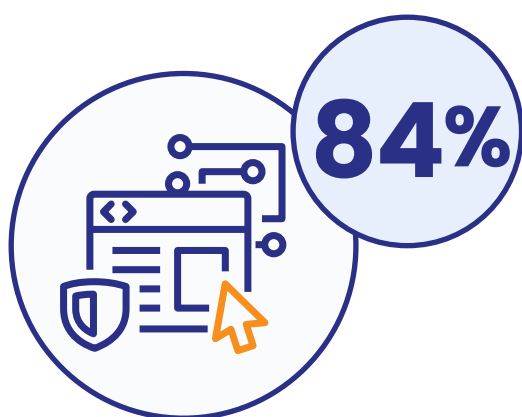

The proportion of Canadians experiencing cyber security incidents is increasing, and the most common incident reported is receiving unsolicited spam (60%).

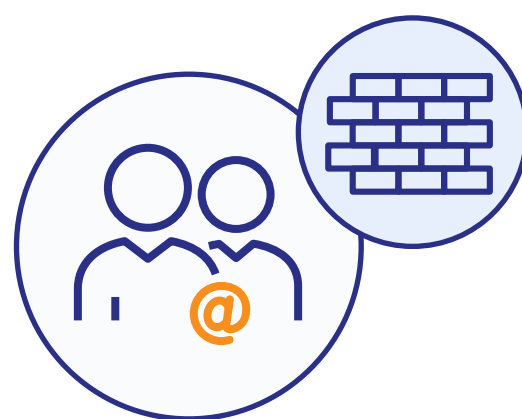

Employers are increasingly looking for a blend of business or soft skills for in-demand digital roles.

Only 30% of the Canadian population is currently “very prepared with workplace digital skills.”

Estimates say that around 84% of jobs in Canada currently require the use of a computer and basic technical skills.

Some barriers people experience in developing their digital skills include: lack of digital access, limited literacy and numeracy skills, and lack of intermediate level programs.
